ASSET MANAGEMENT ORIENTATION

The mutual fund Montsegur Patrimoine, is a fund of dynamic cash, aims to the research of a regular superior performance compared to the EONIA index of reference. Essentially invested (minimum 70%) in monetary products or bonds to respect the criteria of prudence, the balance can be invested in securities or in other mutual funds.

The fund targets a performance superior to the EONIA index, rates close to monetary rates. European Overnight Index Average or average rate balanced on the operations of interbank loans from day to day consented to by 57 banks in the euro zone contributing to the establishment of the interbank rate EURIBOR*

THE ASSETS

The allocation of assets is distributed between:

- Rate division (minimum 70%): monetary securities, bonds and fixed income securities established in euros: loans issued by the States of the European Union and by private institutions, securities issued by the companies of which the assessment may not be inferior to BBB-/Baa3. The arbitrage between the monetary part and bonds will depend on the anticipations of the asset manager, leaning towards the monetary section in any period of incertitude:
- Equity division (maximum 30%): invested according to an opportunist strategy and determined by the average of a basic analysis of successful values in the European zone, without any limit of detention on the markets of small and medium market capitalization shares.

RISK PROFILE

The net asset value of the Mutual Fund can be subjected to a volatility induced by the investment of a section of a portfolio on the stock market and the risk of the liquidity of investments carried out on the securities of small and medium market capitalization shares.

The complete prospectus (in French), recent annual documents and periodicals are on the Montségur Finance website and can be made available at a simple request.
